Job Description: Oakman Aerospace, Inc. (OAI) seeks a full-time DevOps Engineer to manage and develop the build and release process for space and test systems. Candidate will support OAI's modular architecture approach, must be proficient in C/C++ and Java, and possess a clear understanding of software engineering principles and object oriented analysis, design, and development

Basic Qualifications:

- Self-motivated and performing tasks with minimal oversight
- Experience in a multi-discipline environment
- Proficient in Microsoft Excel, PowerPoint, Word
- Excellent verbal and written communication skills; the ability to professionally communicate and coordinate with a wide range of external program sponsors as well as internal management
- Sound time management skills, attention to detail, and priority management to meet deadlines

Required Skills & Knowledge

- Experience programming with C/C++
- Experience with Java
- Experience with build automation tools (e.g. Gradle, Jenkins, etc.)
- Experience with release automation and configuration management
- Experience with one or more scripting languages (e.g. Python, Perl)
- Experience across the software development lifecycle with an emphasis on rigorous development practices
- Experience with formal software development practices including software version control, coding standards and naming conventions
- Object Oriented Analysis and Design techniques
- Strong analytical and problem solving skills
- Organizational and time management skills to prioritize workload and meet time-sensitive deadlines required. Must be able to work under pressure and time constraints. Must be results-oriented with the ability to change priorities as needed

Desired Skills:

- Familiarity with Linux system administration
- Knowledge of aerospace engineering principles
